

Banja Luka workshop survey

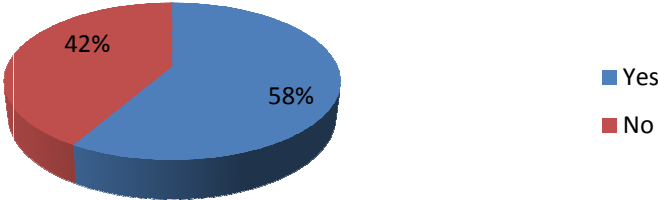

This paper presents information collected during the survey and will be used in order to organize workshop in Banja Luka. Survey was submitted by 15 people from 8 different institutions. Some of the administrators did not answered all questions and did not provide all information. Those answers were not included in this paper.

Next table presents institutions that participated in the survey.

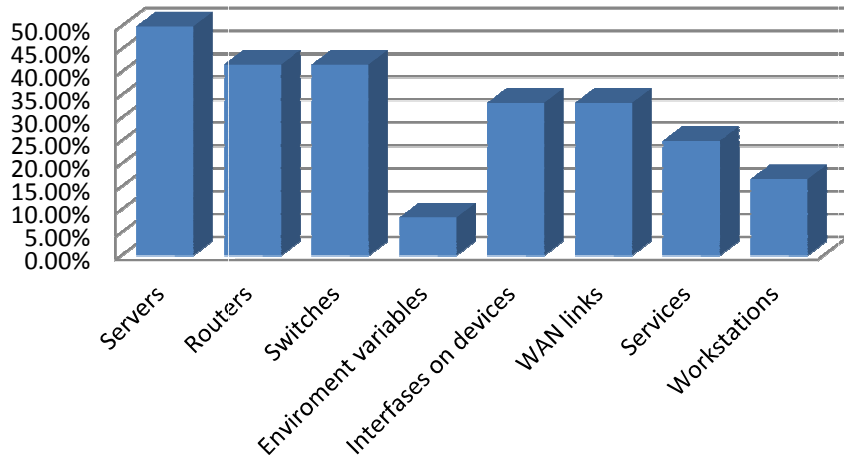

Institution
Pedagoski fakultet u Bijeljini
Saobraćajni fakultet Doboj
Akademija nauka i umjetnosti Republike Srpske
Elektrotehnicki fakultet Istocno Sarajevo
Tehnoloski fakultet Zvornik
Fakultet za proizvodnju i menadzment Trebinje
Elektrotehnicki fakultet Banja Luka

Following graphs are showing survey questions and statistic of survey answers.

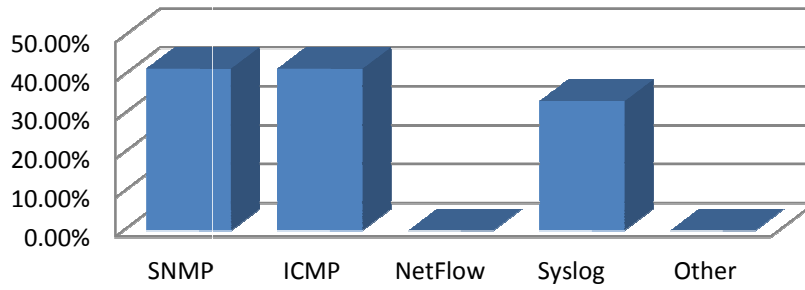

Are you performing monitor of devices and services in your network?

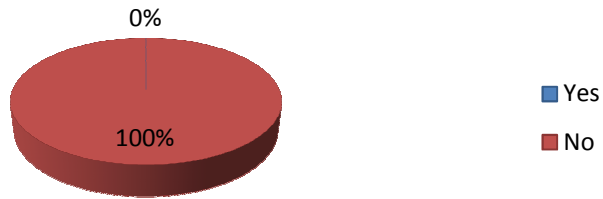

What do you monitor?

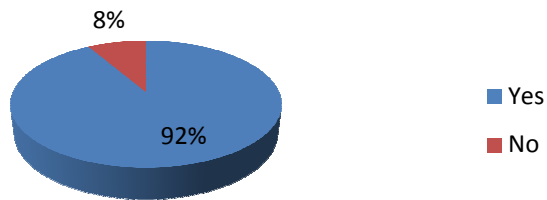

What protocols do you use for monitoring?

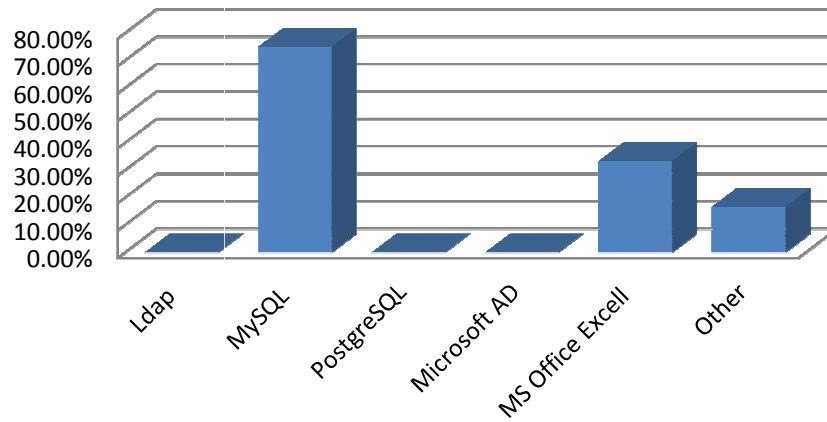

Do you use IPV6 protocol?

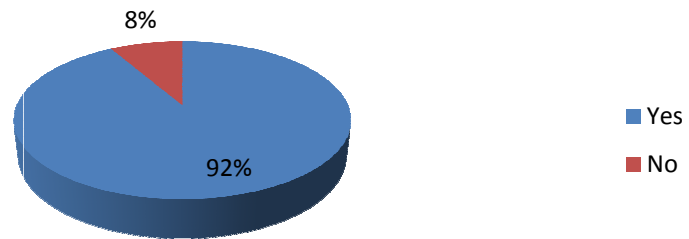

Does your institution have database records of students/employees?

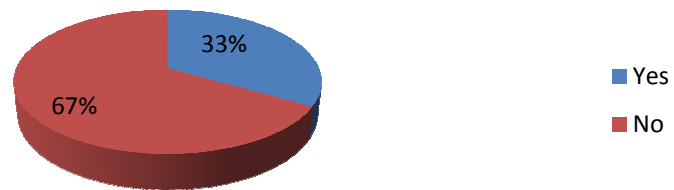

What database do you use in order to store records of students/employees?

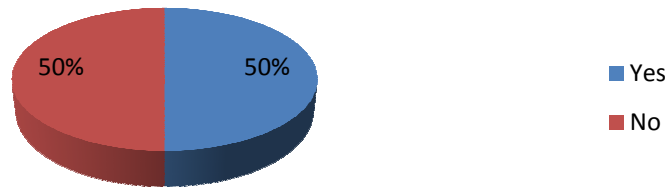

Does your institution have wireless network?

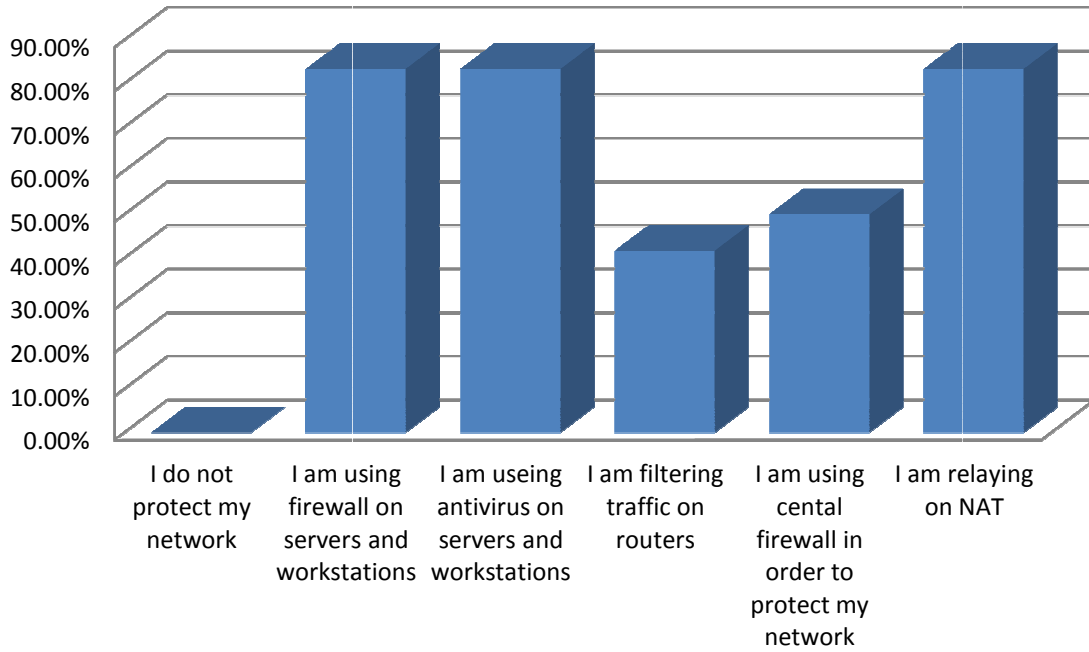

Do you know what is eduroam service?

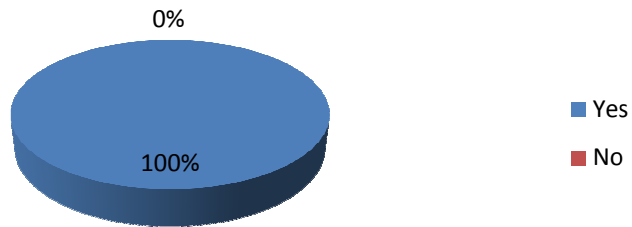

Would you like to use eduroam service in your institution?

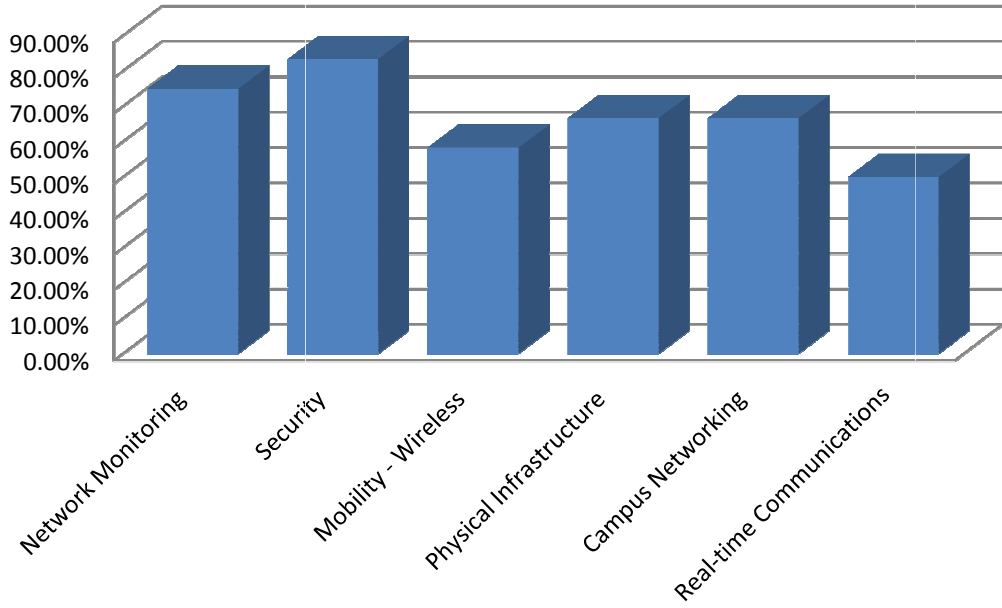

How do you protect your students/employees and your network from external threats?

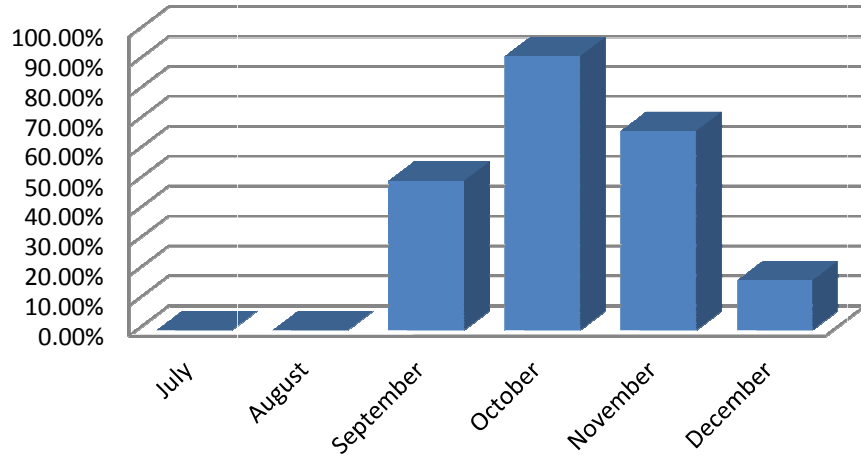

Would you like to attend one-day workshop which will cover some of the following topics: Network Monitoring, Security, Wireless, Physical Infrastructure, Campus Networking, Real-time Communications?

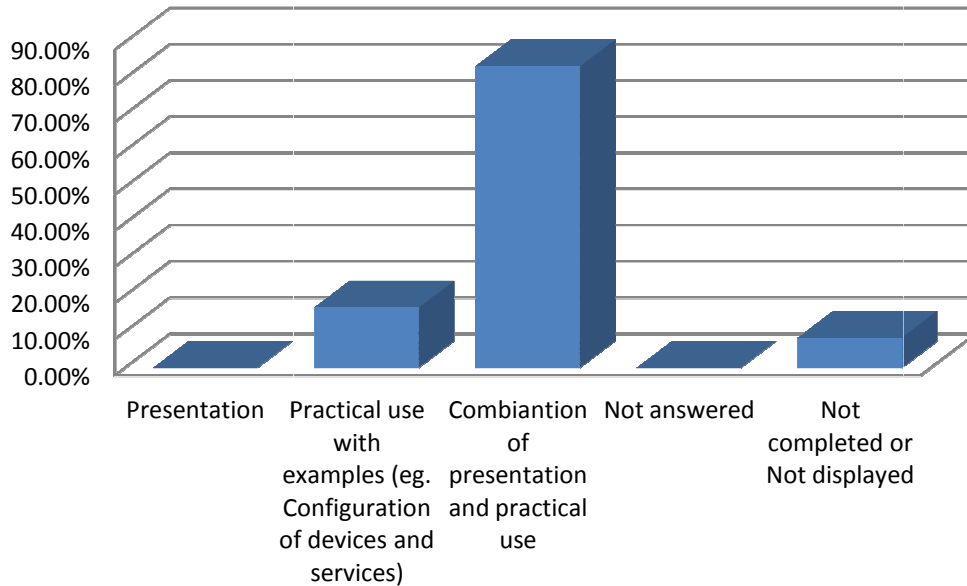

What topics would you like to see on this workshop?

When would you like us to organize workshop?

What kind of activity do you expect on the workshop?

Conclusions

Although only 15 people answered survey, our main contact in Banjaluka (Mihajlo Savić - Elektrotehnicki fakultet Banja Luka) is assuring us that more people will attend this workshop. During the Skype conversation with Mihajlo we have concluded that wireless topic will be interesting for administrators because they have plan to join eduroam community and any kind of experience is welcome. Workshop will be organized during the October. We will try to organize workshop in form that will cover presentations and practical use. Two hands on lab session will be organized. First will cover Ironport configuration and second will cover installation and configuration of ldap database.
